A PROCESS FOR PREPARING (BRANCHED-ALKYL)ARYLSULFONATES AND A (BRANCHED-ALKYL)ARYLSULFONATE COMPOSITION

Abstract of the Disclosure

5

A process for preparing branched alkyl aromatic 10 hydrocarbons, which process comprises contacting branched olefins with an aromatic hydrocarbon under alkylating conditions, which branched olefins have been obtained by dehydrogenating comprises process which isoparaffinic composition over a suitable catalyst which 15 composition obtained has been isoparaffinic hydrocracking and hydroisomerization of a paraffinic wax and which isoparaffinic composition comprises paraffins having a carbon number in the range of from 7 to 35, of which paraffins at least a portion of the molecules is 20 branched, the average number of branches per paraffin molecule being at least 0.5 and the branching comprising methyl and optionally ethyl branches; a process (branched-alkyl)arylsulfonates, preparing sulfonating branched alkyl aromatic hydrocarbons which 25 branched alkyl aromatic hydrocarbons have been prepared by the said process for preparing branched alkyl aromatic hydrocarbons; and branched alkyl aromatic hydrocarbon (branched-alkyl)arylsulfonate compositions and compositions which are obtainable by the processes so 30 defined.
